

# SYPHILIS IS BACK WITH A

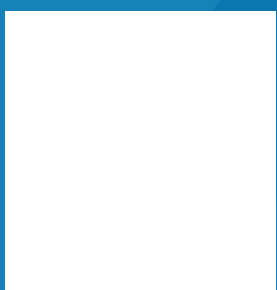

# BANG

## Syphilis screening is an important part of health care.

If you're between the ages of 19-65, free, confidential syphilis screening will be added to your bloodwork today.

Syphilis cases are up in B.C. You may have it and not know it. You can spread it, even if you don't have symptoms.

If left untreated, syphilis can be serious.

Speak with our staff if you have any questions.
